NAVIGATING THE NEW WORLD: HAEMOPHILIA IN THE 21ST CENTURY

11:30 – 12:45 | Saturday, 6 July 2019

ISTH 2019
Room 105 – Melbourne Convention and Exhibition Centre
Melbourne, Australia
Recent advances and innovations in haemophilia treatment have led us to the edge of a new world that has the potential to transform the lives of people with haemophilia.

In this new world, people with haemophilia and their treaters will increasingly be presented with a diverse range of therapeutic approaches and modalities, including bioengineered extended half-life clotting factors; novel “rebalancing” therapies that target natural anticoagulants, such as antithrombin, protein C, protein S, and tissue factor pathway inhibitor; and gene therapies.

Join our international panel of haemophilia experts at a lively, interactive symposium aimed to help navigate the new world of haemophilia treatment. Topics covered will include:

- Advances in our understanding of haemostasis
- The science behind new and emerging treatment options
- Separating myths from reality for new therapeutic approaches
- Potential ways that new therapies might improve the standard of care for people with haemophilia

**AGENDA**

11:30 – 11:35  Welcome and Introductions  
Karin Knobe, MD, PhD  |  Paris, France

11:35 – 11:55  The Evolving Science of Haemostasis  
Claude Négrier, MD  |  Lyon, France

11:55 – 12:15  Novel Therapeutics for Haemophilia: Separating Myths From Reality  
Peter J. Lenting, PhD  |  Le Kremlin-Bicêtre, France

12:15 – 12:30  Which Treatment Gaps Might Be Filled by Novel Therapies? An Interactive Session  
Johnny Mahlangu, MB BCh, MMed, FCPath (Haem), BSc (Lab Med)  |  Johannesburg, South Africa

12:30 – 12:45  Panel Discussion: Striving to Do the Best for Our Patients  
All faculty members
